VITAL® Training statement

The Allergen Bureau has recently updated the VITAL Program to VITAL 4.0. This update includes a change in Reference Doses (based on the latest scientific evidence), and other VITAL Online functionality enhancements.

The key principles underpinning the VITAL program and covered in the VITAL training course remain unchanged. As such those trained within the last 18 months to 2 years, from the date on this notification, can be confident that the training remains current and valid.

It is the responsibility of the VITAL user to ensure currency with changes that occur to the VITAL Science or the VITAL Online tool, as provided by the Allergen Bureau.

Like all professional development the Allergen Bureau does encourage you to remain up to date with key developments by considering re-training if your training or experience with the VITAL program has lapsed.
